Getting Started

Lesson 0 - Take Home Worksheet

If you have trouble with setup, please email Ash Dreyer at stdreyer@ucdavis.edu.

What do you already know?

It's okay if you don't know anything at all about programming; that's how we all started out. We just want to get a feel for areas that you might already feel comfortable in.

1. If you know some programming already, write down the languages you know and circle how comfortable you are with them.

Language	Comfort (1 = Not at all comfortable, 10 = Super confident)									
	1	2	3	4	5	6	7	8	9	10
	1	2	3	4	5	6	7	8	9	10
	1	2	3	4	5	6	7	8	9	10
	1	2	3	4	5	6	7	8	9	10

2. What computer are you going to use for this training? Is it a Mac / Windows / Linux computer? Laptop or home computer?

Are you ready for class?

We want you to be set up for the training, so we can focus more on teaching you concepts than worrying about if your environment is setup. It's okay if you weren't able to setup everything, or if you had a lot of trouble in the process. That's why we're doing this as soon as possible, because there will always be hiccups. It's not your fault. Shoot us a message always if you need help.

1. What's your email? (The team needs this for email alerts and for ease of communication)
2. What date were the lesson notes for **Lesson 1: Introduction to Swift** added on Piazza? (We need to make sure you're on Piazza and that you can find the resources we post!)

Name: _____

3. What's your Stack Overflow username? (This is a great resource and we want you to use it!)
4. What's your GitHub username? (We will be using GitHub and the sooner you're signed up and set up, the better.)
